**WE BELIEVE, YOUR RECOVERY MEANS
MORE THAN JUST PHYSICAL.**

Utah Valley Specialty Hospital, scheduled to open in Summer 2006, is a 40-bed long term acute care hospital. UVSH will provide specialized medical, nursing and rehabilitation services for patients who need more acute medical care for their recovery process but no longer require services in a traditional acute care hospital. Our patients will typically have a catastrophic or chronic medically complex condition that requires more intensive services than found in other post-acute settings, such as a skilled nursing facility. The physicians that will comprise our medical staff are common to the traditional acute hospital: pulmonologist, cardiologist, internist, physiatrist, gerontologist, etc.

We promote a healing and nurturing environment at our facility, responding to the medical, physical, psychological and social needs of our patients. Treatment is tailored based upon each patient's medical condition and needs.

Our multidisciplinary services will include:

- Intensive Care
- Medically Complex
- Modified Rehabilitation
- Ventilator/Pulmonary
- Wound

Diagnoses and conditions to be treated include:

- | | | |
|--|---|---------------------------|
| - ALS – Amyotrophic Lateral Sclerosis | - Diabetes | - Pneumonia |
| - Amputation | - Drug Resistant Infections (MRSA, VRE) | - Post-Operative Patients |
